

ACCELERATE APP DEVELOPMENT WITH RED HAT AND COUCHBASE

SOLUTION BRIEF

Container application platforms
accelerate development

DEVELOP, HOST, AND SCALE YOUR APPS FASTER USING CONTAINERS

Container application platforms combine standardized application packaging, agile development methods, and hybrid cloud infrastructure to help development teams and IT operations drive agility and business innovation. These platforms provide prebuilt and packaged developer tools, runtimes, and automation for faster development cycles. Developers can focus on rapid, high-quality development—using the tools they want to use. And product teams can concentrate on delivering new services and products to market more quickly.

RED HAT OPENSIFT

Red Hat® OpenShift®—the award-winning Container Platform—helps organizations develop, deploy, and manage traditional, cloud native, and micro-services-based applications seamlessly across infrastructures. Based on Docker container packaging and Kubernetes container cluster management, OpenShift delivers a superior developer experience within a stable, secure, and scalable operating system environment.

OpenShift supports the entire the application life cycle:

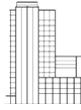

- Develop - create applications easily and quickly using a web console, command-line interface, or integrated development environment.
- Build - push code to be built and run on OpenShift through your software version control solution or integrate OpenShift with your own automated build and continuous integration/continuous deployment system.
- Deploy - OpenShift orchestrates where application containers will run and manages the application to ensure it is available for end-users.
- Manage - with OpenShift you can monitor, debug, and scale your app on the fly.

Available as a cloud-based service and for deployment on developer laptops, in enterprise datacenters, and hybrid cloud use cases, Red Hat OpenShift provides a consistent platform so you will be ready to code and deploy your apps faster than ever before.
