Company Description

New Relic is a leading digital intelligence company, delivering full-stack visibility and analytics to more than 40% of the Fortune 100. The New Relic Digital Intelligence Platform provides actionable insights to drive digital business results. Companies of all sizes trust New Relic to monitor application and infrastructure performance so they can quickly resolve issues, and improve digital customer experiences.

Product Profile

Built for developers, devops, and operations teams, New Relic APM helps you build, deploy, and maintain great software. It gives your team the code-level visibility that helps you pinpoint problems, surface up your slowest performing transactions and ensures great application experience.

Overview

New Relic APM ensures application availability and performance by providing visibility to troubleshoot errors in applications.

Executive Summary

New Relic gives you detailed performance metrics for your software running on Red Hat®, in real-time. From code to containers to customer experience, New Relic instruments the full stack to give teams visibility into how applications are performing in production. With integrated alerting and analytics features, New Relic helps teams resolve and troubleshoot issues faster.

Statement from Partner

“As New Relic customers look to migrate critical workloads to the cloud or move workloads around hybrid clouds and multi-clouds, they are increasingly turning to containers to create workload bundles and simplify the process. Using New Relic, Red Hat customers can gain additional visibility into their production software and infrastructure. New Relic’s detailed performance metrics, especially the ability to instrument code running inside containers makes it easier for organizations to build better applications using solutions like Red Hat OpenShift.” — Lee Atchison, Senior Director Strategic Architecture and author of “Architecting for Scale”

Statement from Red Hat Connect

“Customers are looking to migrate their applications to the cloud leveraging containers as the deployment model,” said Mike Werner, senior director, Global Technology Partners, Red Hat. “Red Hat container certification assures a supportable and performant platform for all types of customer deployment models. Red Hat is thrilled to work with software partners like New Relic, resulting in the world’s largest commercial ecosystem for containers.”

Product Benefits

New Relic APM gives you detailed performance metrics for every aspect of your environment, in real-time.

- View application performance down to specific lines of code, see how each component is connected, and resolve problems fast.
- Move from reactive to proactive management by staying ahead of potential problems before they blow up.
- One comprehensive tool for every app in any environment - Java, Ruby, PHP, Python, Go, Node, .NET, and more
- As you scale with RedHat, New Relic scales with you using our multi-tenant SaaS

Use Cases

From improving end-user experiences, embracing DevOps, or migrating to the cloud, New Relic APM helps provide data to gain insight into your application, help you scale for your biggest day, pinpoint application issues, and acceptance testing of your application migration.

- Visualize dependence between different components of your applications, infrastructure, and third-party services
- View and alert critical on application performance trends
- Monitor deployment changes, fix, and detect any faulty deployments before they affect your users
